

FOUNTAIN FLAME

*Dancing flames
on water*

Distributed by Le Maitre USA LLC

The Fountain Flame is a breakthrough in the world of special effects creating a visual spectacular with the interplay of fire and water on ponds, lakes and pools (both indoor and outdoor).

Water fountains up to 30ft high are illuminated by coloured LEDs while fire dances on the top. A variety of fire and water combined effects can be achieved with flames projected onto vertical jets of water, creating endless possibilities

The Fountain Flame consists of the control box underwater with the fountain flame plus a 32ft hose-cable set. It has 8-channel DMX which controls the ignition burner, pump, size of flame, and the three LED colors. Propane gas is fed into the fountain jet and ignited with the pilot burner.

The Fountain Flame is a revolutionary and eye catching effect ideal for water-based shows.
